

We are dedicated to inspiring people to learn about and care for their eyes by putting affordable, accurate vision tests directly into their hands.

Based on revolutionary patented technology, EyeQue™ is bringing self-administered eye tests to billions of people around the world, many of whom may not have had the opportunity to test their eyes and correct their vision without access to this low cost, convenient solution.

Over 60 percent of the world's population are vision impaired. Hundreds of millions— children and adults— struggle with normal activities like studying, working, and caring for their family.

Optometrists urge people to have an eye health exam every other year, yet the majority see their eye doctor far less frequently than recommended.

In developing countries, people have limited if any access to optometrists or corrective glasses and therefore, little hope of correcting their vision.

The mobility and affordability of EyeQue intelligent vision solutions are destined to make a profound global impact.

EyeQue is on a global mission to elevate eye care.

We are committed to making clear vision a reality for everyone.

Our Solutions

The team at EyeQue have developed a family of intelligent vision solutions that make it easy and affordable for anyone to test and track their eye sight.

The EyeQue family of intelligent vision solutions leverage patented processing algorithms and optical technologies to create personal vision records that are stored securely in the cloud. Test results create a digital personal vision history allowing anyone to test and track vision changes over time, instantly access results in-app and online, and conveniently share data with doctors.

The award-winning EyeQue Personal Vision Tracker™ is the world's first in-home, fully mobile refraction error test – measuring nearsightedness, farsightedness, and astigmatism.

The EyeQue Insight™ is the first gamified solution for accurately determining the sharpness of vision in children and adults. It's fun, fast, and convenient for families, school administrators, group organizations, and charities.

Our Clear Vision

We have one simple reason for being– make cool vision technologies available to the world at the lowest possible cost. Founded by serial entrepreneurs, Tibor Láczy and John Serri, the growing team of dedicated engineers, product marketing, and business professionals is innovating in the heart of Silicon Valley.

Our intent is to make clear vision a reality for everyone. The EyeQue Personal Vision Tracker is the first step toward this goal– placing vision testing directly in the hands of consumers or under the supervision of an eye care provider.

EyeQue is eager to collaborate with and arm the optometrist community with intelligent vision solutions engineered to be low cost, convenient, and fun ways for patients to become more participatory in their own eye health. Eye care professionals can use these platforms to extend their reach, attract new patients, improve patient outcomes, and maintain communication between visits.

Finalist for the 2017 Prism Awards for Photonics Innovations by the SPIE international society for optics & photonics.

Awarded Best of Innovation in the Fitness, Sports, & Biotech category for the international CES2017 show.

While using EyeQue to personally measure and track refractive error has the benefits of detecting change between regular eye exams, it does not replace a comprehensive eye exam that evaluates ocular health or binocularity. EyeQue urges people to visit a doctor annually for a full eye health exam and regularly reminds its users through in-app notifications.
